Information and communication technology (ICT) has become a generic and indispensable tool for addressing and solving problems in such diverse areas as management, social and health services, transportation, security and education. As the cost of equipment drops dramatically, it also becomes widely accessible in the developing countries. However, problems of high costs for adequate training of personnel, access to state-of-the-art software and the consultancies needed to facilitate access to ICT can constitute highly dissuasive factors in the dissemination of ICT in developing countries. This volume describes a series of successful initiatives for the insertion of ICT in developing economies. It also identifies significant problems that are likely to be encountered, and suggests useful solutions to these problems. It therefore serves as a useful tool for example applications, and for the successful assimilation of these technologies in developing societies and countries. Reduced to working as a domestic help after the death of her father, her life took a dramatic turn when she was offered a film role and, encouraged by her uncle, took it. In this lively and candid account of her experiences (originally published in 1973 as *Shobarey Aami Nomi*), Kanan Devi recalls the early days of cinema in Bengal, analysing and comparing conditions of film acting in the early 1930s with what she saw about two or three decades later when she herself was a producer and director, with her

own film company, Shrimati Pictures. This fascinating and unusual story offers not only a different perspective on the growth of the film industry in Bengal but also a first hand account of the position of women who came into the public sphere in the early decades of the last century.
