Fans of Cheryl Strayed's *Wild*, Bill Bryson's *A Walk in the Woods*, and Elizabeth Gilbert's *Eat, Pray, Love* will enjoy author Toby Neal's road trip travel memoir of self-discovery as she and her husband journey through the National Parks! I had a dream to live a "normal" life and I attained it; but along the way, I lost myself. My story began in *Freckled: a Memoir of Growing up Wild in Hawaii*, but it continued after I married the man of my dreams, completed my education with multiple degrees, had a successful career, and raised two beautiful children. I sacrificed to get to where I was. Though I didn't regret anything, flat on my back in the doctor's office on the cusp of my fiftieth birthday, my health was crumbling. I no longer recognized myself. I turned my head and saw a calendar on the wall: Bryce Canyon National Park in Utah beckoned me with its mysterious sandstone hoodoos. A road trip traveling through the National Parks was just what I needed to rediscover the girl I'd been; it could help me turn a corner into my new career as a writer, and my husband would enjoy a chance to photograph the natural wonders we saw. Sometimes, a twelve-thousand-mile road trip is also a personal quest. An absorbing travel narrative about defining and facing the limitations and opportunities of midlife. An absorbing travel narrative about defining and facing the limitations and opportunities of midlife. —Kirkus Reviews

*Stories of Our Longmont Parks* is a pictorial history of parks built in Longmont, Colorado from 1871 to 2020. The book includes all neighborhood and community parks built during this 150 year period. The chronology of their development is arranged into three eras with context given to the influences of each period. Historical and recent photographs are included as well as information on who or what the park is named for and stories of their development. Stories told by those who helped in the park's development are included. As of 2020, the City of Longmont has developed thirty-one Community and Neighborhood Parks. The original five parks were envisioned by the Chicago-Colorado Colony, who founded Longmont in 1871. Included in this early era are two other parks built before the 1930s. A lull in development occurred between the 1930s and the 1960s when the Baby Boom helped spur the next era of development. This period lasted until the 1990s. The last era describes work done in the past thirty years. Taken from historical archives and personal stories, this book creates an important record and understanding of the public parks within the community. This collection of stories provides a glimpse into Longmont's park history and the people who were part of their creation. The guide will introduce readers to more than 300 county parks throughout the Gopher State organized by region (North, East Central, West Central, Central, Southwest, and Southeast). The book includes the author's 25 favorite parks and what makes them uniquely enjoyable, the best parks for family camping, water sports, horseback riding, winter sports, and other special uses. Readers will find detailed information about accessibility, natural features, activities, and directions. On a network of paths that ring the San Francisco Bay, high on the ridge line, the Bay Area Ridge Trail provides quickly accessible recreational opportunities for Bay Area residents and visitors alike to hike, mountain bike, and ride a horse. When complete, this 550-mile trail will link more than 75 public parks and open spaces. With over a dozen new hikes, the fully updated third edition of the official guide to the trail covers the more than 300 miles that have been opened to date. Each trail-segment description includes information on amenities such as restrooms and water, driving directions, and accessibility logistics for those traveling by foot, mountain bike, horseback, wheelchair, or public transportation. Official guidebook, published in cooperation with the Bay Area Ridge Trail Council, which plans, promotes, and constructs the Bay Area Ridge Trail and offers outings, volunteer opportunities, and membership benefits ([www.ridgetrail.org](http://www.ridgetrail.org).) An 1898 history of the public green spaces of London, providing details of their former use and present condition. A pictorial essay on the architecture of gardens, parks, playgrounds and open spaces, with a detailed text explaining the sociological and design influence built landscapes play in our lives. This reference stresses the importance of incorporating landscape into the design environment. Parks and recreation systems have evolved in remarkable ways over the past two decades. No longer just playgrounds and ballfields, parks and open spaces have become recognized as essential green infrastructure with the potential to contribute to community resiliency and sustainability. To capitalize on this potential, the parks and recreation system planning process must evolve as well. In *Parks and Recreation System Planning*, David Barth provides a new, step-by-step approach to creating parks systems that generate greater economic, social, and environmental benefits. Barth first advocates that parks and recreation systems should no longer be regarded as isolated facilities, but as elements of an integrated public realm. Each space should be designed to generate multiple community benefits. Next, he presents a new approach for parks and recreation planning that is integrated into community-wide issues. Chapters outline each step—evaluating existing systems, implementing a carefully crafted plan, and more—necessary for creating a successful, adaptable system. Throughout the book, he describes initiatives that are creating more resilient, sustainable, and engaging parks and recreation facilities, drawing from his experience consulting in more than 100 communities across the U.S. *Parks and Recreation System Planning* meets the critical need to provide an up-to-date, comprehensive approach for planning parks and recreation systems across the country. This is essential reading for every parks and recreation professional, design professional, and public official who wants their community to thrive. *The Case for Open Space* explores the benefits of private sector involvement in creating, maintaining, operating, and programming parks and open space—ranging from enhanced returns on investment for developers that include open space in their projects to improved community health outcomes. This publication by the Urban Land Institute's (ULI) Building Healthy Places Initiative and ULI's Sustainable Development Council (SDC) incorporates research conducted by ULI staff and SDC members, as well as takeaways from stakeholder interviews—including with ULI members who have developed or supported parks and open space through their project investments.

Dog Parks Unleashed is a directory of local dog parks located throughout the entire United States. Established in the 1940s, the Five Eyes intelligence network consists of Australia, Britain, Canada, New Zealand, and the United States. The alliance was integral to shaping domestic and international security decisions during the Cold War, yet much of the intelligence history of these countries remains unknown. In *The Bridge in the Parks*, intelligence scholars from across the Five Eyes come together to present case studies detailing the varied successes and struggles their countries experienced in the world of Cold War counter-intelligence. The case studies draw on newly declassified documents on a variety of topics, including civil liberties, agent handling, wiretapping, and international relations. Collectively, these studies highlight how Cold War intelligence history is more nuanced than it has often been portrayed – and much like in the world of intelligence, nothing is ever entirely as it seems. Describes how 15 derelict areas of the United States were developed into thriving new parks and offers advice to public agencies and private developers on how to go about revitalizing urban areas. The text includes information on financing techniques, design, management and programming. What, exactly, is a park? What role have parks played in cities, and what will they need to be in the new economics and society of 21st century America? To answer these questions, noted planner and planning educator Alexander Garvin first describes the parks agenda of Frederick Law Olmsted, which dominated the design of American parks for over a century, until the last 50 years of suburbanization so radically changed the nation's landscape and society. Parks and open space, once thought of as essential to public life and an important government responsibility, are now often regarded as amenities that can be done without. In order to develop a new agenda that fits the economics, needs, and expectations of Americans in this century, Garvin studied the details of successful parks and open space projects throughout the country. He distilled a set of principles to guide the actions of public and private leaders in all aspects of park, recreation, and open space development. His ideas—many of which challenge existing practices and conventional wisdom—fit new times and circumstances in America. This beautiful report is extensively illustrated with plan drawings and the author's own color photographs of parks across America. *Parks, Recreation, and Open Space* was sponsored in part by the City Parks Forum (CPF), a fellowship of mayors, their park advisors, and community leaders that encourages collaboration and exchange of ideas about the role of parks in communities. The CPF is administered by the American Planning Association and supported in part by the Wallace-Reader's Digest Funds and the Doris Duke Charitable Foundation. It is the first in a series of three reports by the City Parks Forum. The second report is *Parks and Economic Development (PAS 502)* by John L. Crompton. Excerpt from *The Duty of the Municipality of Philadelphia to Provide Small Parks and Open Spaces for the Comfort and Health of the People of the City: A Short Paper Read Before the Medical Jurisprudence Society of Philadelphia*, by John A. Clark, on His Retiring From the Presidency of the Society, February 11th, 1890 One possible cause of this failure to provide additional open squares may have been that the city was divided into a number of small municipalities, each of which had its own separate government. These outlying districts were indisposed to incur any debts that could be avoided. Something, however, had already been done prior to the consolidation of the city. For years American urban parks fell into decay due to disinvestment, but as cities began to rebound—and evidence of the economic, cultural, and health benefits of parks grew—investment in urban parks swelled. The U.S. Conference of Mayors recently cited meeting the growing demand for parks and open space as one of the biggest challenges for urban leaders today. It is now widely agreed that the U.S. needs an ambitious and creative plan to increase urban parklands. *Urban Green* explores new and innovative ways for “built out” cities to add much-needed parks. Peter Harnik first explores the question of why urban parkland is needed and then looks at ways to determine how much is possible and where park investment should go. When presenting the ideas and examples for parkland, he also recommends political practices that help create parks. The book offers many practical solutions, from reusing the land under defunct factories to sharing schoolyards, from building trails on abandoned tracks to planting community gardens, from decking parks over highways to allowing more activities in cemeteries, from eliminating parking lots to uncovering buried streams, and more. No strategy alone is perfect, and each has its own set of realities. But collectively they suggest a path toward making modern cities more beautiful, more sociable, more fun, more ecologically sound, and more successful. Research has shown that successful public spaces are ones that are responsive to the needs of their users, are democratic in their accessibility, and are meaningful for the larger community. This work examines studies to glean findings and design implications related to user needs and conflicts.
